WIN ATLAS Career Exploration

Placing college and career readiness in
the hands of every learner

Introducing a Career Planning and Exploration Mobile App

Technology is changing the way today's teenagers and young adults interact with the world. Smartphone and tablet ownership continue to skyrocket, and the reason is clear: the possibilities and functions these devices provide make them essential in modern, everyday life.

WIN Learning is taking advantage of this growth with its Career Planning and Exploration Mobile App. Utilizing this engaging mobile-delivery approach, learners can explore potential careers, complete an online Interest Profile to assist with choosing a career pathway, and build a plan to meet requirements of a desired career opportunity.

Learners have the ability to engage in various career scenarios by filtering career clusters by region, salary, job zones, and opportunity. Now, you can help your learners identify potential careers and gain insight into the relationship between their education and potential career pathways.

WIN ATLAS is an engaging career planning and exploration mobile app that puts college and career readiness in the hands of every learner. Complete an Interest Profile and Work Priorities survey to begin exploring a career pathway that's right for you.

Access WIN ATLAS from your iOS or Android mobile device.
