

West Virginia Career Technical Education

Career Readiness
Courseware &
Credentials

Statewide Partnership

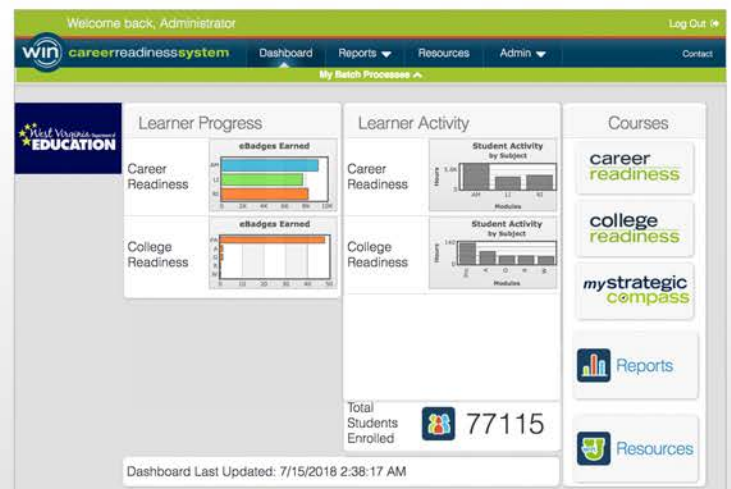

- West Virginia Department of Education
- West Virginia Department of Corrections
- Career Technical Education

Implementation

The West Virginia Department of Education has made the WIN Learning Career Readiness System available to every Career Technical Education (CTE) student in the state.

The West Virginia myStrategic Compass online web instance was created to provide a robust career exploration system for West Virginia students.

Building individual career strategies starts with looking at the student's personal interests and values and ends with a detailed plan on how to navigate postsecondary options to get to a target career path. Detailed profiles of occupations, educational programs, and institutions provide an unparalleled source of information and guidance to more than 77,000 West Virginia students.

WIN Learning Solution

WIN Learning is playing a key role in helping West Virginia high school students across the state complete high school and prepare for the post-secondary education and workforce training that is critical to the state's future economic success.

The West Virginia Department of Education has implemented the WIN Career Readiness Courseware, Soft Skills, and myStrategic Compass to enhance academic skills, employability skills, and career exploration and planning.

myStrategic Compass is available to every middle and high school student in the state. All CTE students complete career exploration activities, identify target occupations, and build individual skills-based career development plans. The skills needed to perform the target occupations are developed via the WIN Career Readiness System solutions.

For the past five years, districts and state offices have issued the WIN Career Readiness System and myStrategic Compass to evaluate the academic and soft skill readiness of students and to align that data with key economic indicators.

To date, more than 24,000 users have taken advantage of accessing the Career Readiness Courseware, logging over 27,000 hours in the curriculum.

WIN Professional Services has provided training in the administration of the system to over 600 teachers. In the first four months of the project, over 11,500 learners have logged time in the system, and scores on state-mandated workforce credential testing have improved significantly.
